- Cloud hosted with Microsoft Azure
- Secure access to APIs with subscription keys
- Clients can create and publish their own API endpoints
- Powerful multi-system integration via custom API plugins
- API is compatible across all BlueCherry Versions
- Connect to BlueCherry data sources such as the data warehouse

CGS's BlueCherry® API Suite

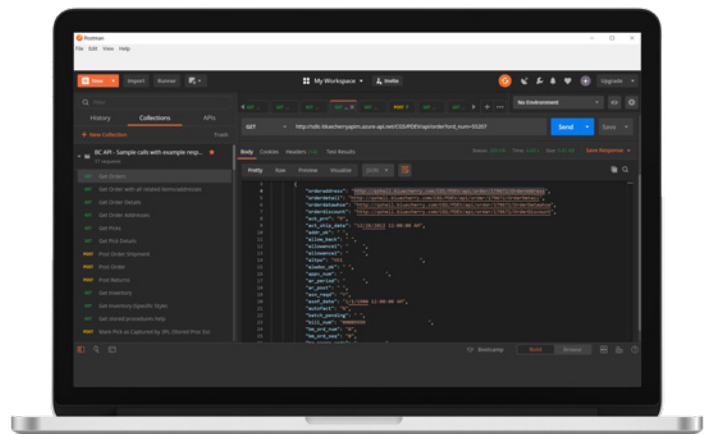

In today's fast-paced fashion, apparel and retail sector, consumers demand a seamless shopping experience across all channels.

Optimizing eCommerce and supply chain operations is required to grow and manual processes in your supply chain will negatively impact their experience and your bottom line. An integrated supply chain stack gives you the ability to meet your customers' omnichannel needs and makes growth both possible and sustainable.

One Platform For API Integrations

BlueCherry® API is a cloud-based solution that allows retail, fashion and apparel brands to streamline collaboration and omnichannel operations by integrating the back-end supply chain.

Our public API allows users to connect BlueCherry ERP to third-party applications without the need for external interfaces. Deployed in the cloud or on-premise, BlueCherry API allows users to open up the ERP platform while managing security and control by enabling various levels of authorization based on profiles and roles.

BlueCherry® API Options

Everything you need to gain real-time visibility and control. Integration is simple to configure and completely automates data exchange between BlueCherry and third-party platforms via prebuilt APIs and connectors.

STARTER

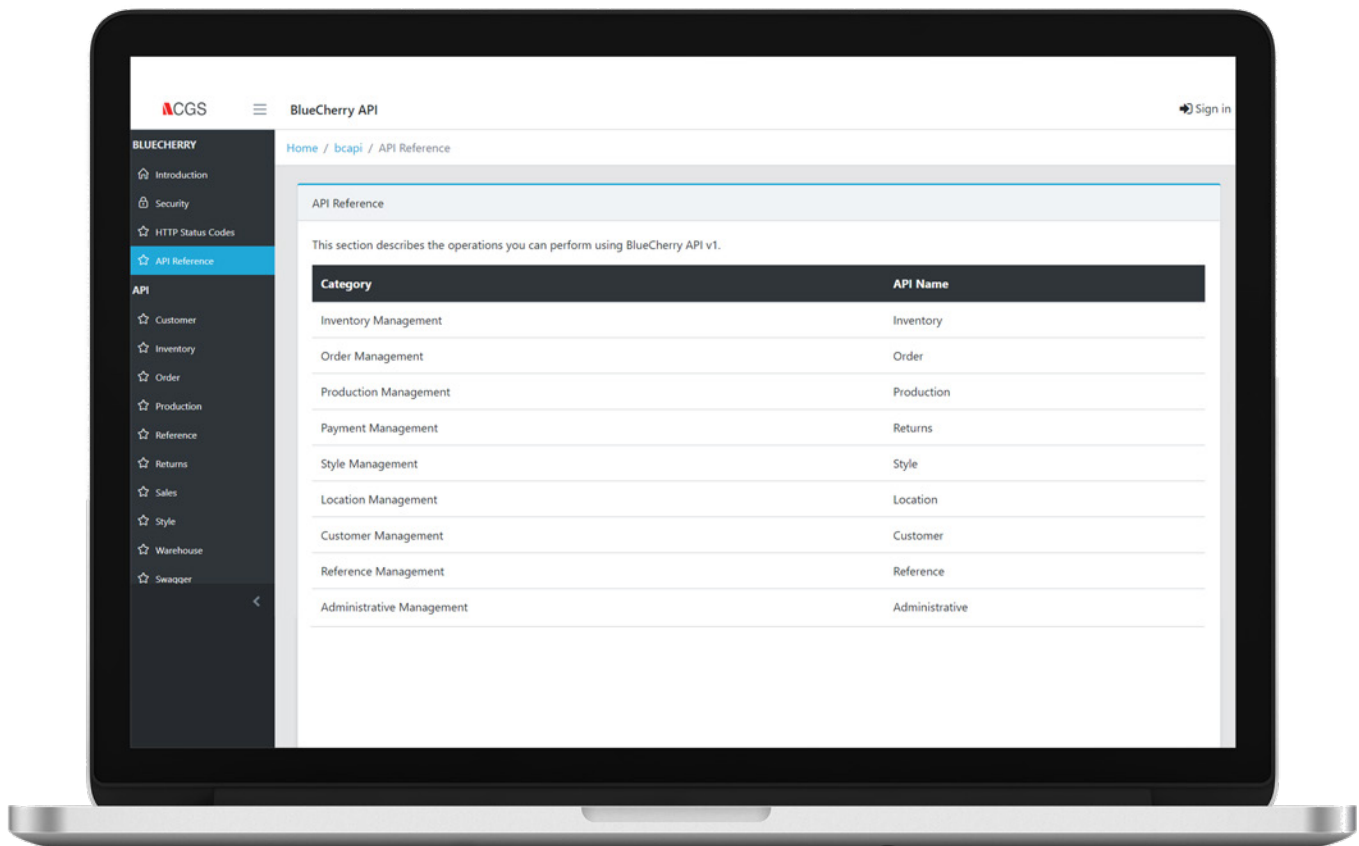

Up to 5
subscription keys
Maximum of 125
requests per second

PRO

Up to 15
subscription keys
Maximum of 250
requests per second

ENTERPRISE
